

APPENDIX E-027 V

LOGISTICS REASSIGNMENT STORAGE
INFORMATION DOCUMENT AND REPLY REVERSAL VIOLATIONS

1. INPUT DOCUMENT

a. Appendix B-27, Logistics Reassignment Storage Information Document (Reversals), DIC DZC.

b. Appendix B-34, Logistics Reassignment Storage Information Reply Document (Reversals), DIC DZD.

2. INPUT TO PROCEDURE DECISION CHART

Logistics Reassignment Storage Information Asset Discrepancies.

3. PURPOSE, CONTENTS, AND RESPONSIBILITIES

This appendix is applicable to **DLAM 4140.8** and provides instructions for the research and correction of the DIC DZC and DZD reversals. Violation Reason Codes are listed below in alphabetical order. The LR Monitor, MSO, DSO, is responsible for processing all of these violations:

VIOLATION

REASON CODE

DEFINITION

HI Insufficient Quantity.

PU Input does not match record.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VRC HI.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code HI indicates that:

(a) A DIC DZC or DZD reversal has attempted to process, but since automatic inventory actions have already been generated no action was taken to automatically reverse the DZC or DZD.

(b) After a DZD was received that matched to a DZC on file, a DZC reversal was input.

(2) PROCESSING/RESEARCH REQUIRED

Research the appendix F-276, LR Storage Information Asset Discrepancies, output on the sixth working day of each month, to determine what automatic actions have occurred. (These actions are explained in appendix E-027 P.) Based on the data in the DZC/DZD reversal, reverse the automatic actions, as appropriate, and process the corrected transactions.

b. VRC PU.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code PU indicates that a DIC DZC or DZD reversal has attempted to process but found no match on RIC, document number, NSN, or quantity.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research the appendix F-276, LR Storage Information Asset Discrepancies, output on the sixth working day of each month, to determine if there was any actions for this document shown on this listing. If so, take action to correct the previous transactions based on the data in the DZC or DZD reversal.

(b) If no information is found on the F-276, request a THF print for the NSN to determine the actions that occurred on the ETD. If materiel was transferred to the GIM on the ETD, a DEF will be on the THF for the quantity transferred. A DZC, with the same quantity and document number, was forwarded to the storage depot. The DZD which was returned from the depot was not printed on the F-276 because it matched the DZC exactly. Take action to reverse the original DEF, based on the data in the DZC or DZD reversal.

5. REENTRY INSTRUCTIONS

Since the DZC or DZD violations are uncontrolled violations, no reentry is required.
